Notice of Allowability	09/646,773	HAUGLI ET AL.
	Examiner	Art Unit
	Mark A Mais	2664
The MAILING DATE of this communication appears on the cover sheet with the correspondence address All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS. This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.		
1. This communication is responsive to <u>February 3, 2005</u> .		
2. The allowed claim(s) is/are 1-25.		
3. \boxtimes The drawings filed on <u>22 September 2000</u> are accepted by	the Examiner.	
 4.		
Attachment(s) 1. ☑ Notice of References Cited (PTO-892) 2. ☐ Notice of Draftperson's Patent Drawing Review (PTO-948) 3. ☐ Information Disclosure Statements (PTO-1449 or PTO/SB/C Paper No./Mail Date 4. ☐ Examiner's Comment Regarding Requirement for Deposit of Biological Material	6. Interview Summary Paper No./Mail Da 08), 7. Examiner's Amend	ate

Application/Control Number: 09/646,773 Page 2

Art Unit: 2664

DETAILED ACTION

Allowable Subject Matter

1. Claims 1-25 are allowed.

2. The following is an examiner's statement of reasons for allowance:

The examiner has not found a packet-switched satellite data communication system having an earth control station and remote terminals that communicate wirelessly, where the control station receives data packets to be routed to the remote terminals, inputs the data packets into a DSP that outputs a multiple carrier baseband signal that produces multiple data channels, wherein the DSP dynamically assigns data packets destined for a particular remote terminal to one or more data channels, and the DSP also generates a control channel carrying control information pertaining to the assigned data channels, and simultaneously transmitting the multiple data channels and the control channel by performing digital-to-analog conversion on the multiple channels to produce an analog baseband signal and each of the remote terminals receives the analog baseband signal, performs analog-to-digital conversion, and buffers the digitized packets in a buffer while continuously monitoring the buffer for control information from the control channel, and processing the control information to extract the proper packet data over the one or more data channels assigned to the particular remote terminal by the DSP.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:
